Protein is a macromolecular polymer of amino acids. It is a long chain of amino acids linked by peptide bonds. The amino acids are arranged in a specific sequence, which determines the protein's structure and function. The protein structure is determined by the sequence of amino acids and the interactions between them. The protein structure is a complex three-dimensional shape that is determined by the sequence of amino acids and the interactions between them. The protein structure is a complex three-dimensional shape that is determined by the sequence of amino acids and the interactions between them.
